Steven Ikharo

DevOps and Cloud Intern

Scarborough, ON • +1 (416) 832-3593 • stevenikharo7@gmail.com • LinkedIn: linkedin.com/in/steven-ikharo • GitHub: github.com/Stevo0o0

Summary

Aspiring **DevOps and Cloud engineer** passionate about automation, reliability, and scalable infrastructure.
Hands-on experience designing CI/CD pipelines, containerizing apps, and managing AWS environments with **Terraform**, **Jenkins**, and **Docker**.
Curious, analytical, and collaborative , eager to help Ada build and monitor reliable systems that power AI-driven customer experiences.

Education

Software Engineering Technology (Advanced Diploma) | Centennial College | Scarborough, Ontario | In Progress
Bachelor of Engineering, Mechanical Engineering | Landmark University | Omu-aran, Kwara State | Aug 2023

Work Experience

Community Safety Team Member
One Community Solutions, Toronto, Ontario
May 2025 – Present

- Conduct routine patrols of shelter facilities and surrounding areas to identify and remove prohibited items (e.g., paraphernalia), ensuring a safe environment for residents

- Control access to shelter grounds by screening visitors and deterring non-residents from entering unsupervised
- Enforce shelter policies by monitoring resident behavior and intervening to prevent disturbances to neighbors and adjacent establishments
- Distribute food packages and care kits to community members in need, while maintaining respectful, person-centered interactions
- Respond to community disturbance calls—liaising with residents, non-residents, and local businesses—to assess situations and restore order
- Document all incidents and actions in detailed logs and incident reports, maintaining accurate records for management review

National Youth Service Corps Member (Operator)
Transmission Company of Nigeria, Corporate Headquarters, Abuja
December 2023 – October 2024

- Conducted regular patrols and inspections to ensure the safety and security of the transmission station.
- Monitored access points, controlled visitor entry, and reported unauthorized activities.
- Maintained daily security and operational logs, escalating incidents when necessary.
- Monitored system parameters to ensure reliability and stability across transmission networks.
- Identified and resolved faults within power transmission lines to maintain uninterrupted power supply.
- Conducted system studies, fault analysis, and load flow analysis for operational planning and performance improvement.
- Ensured stable frequency within operational limits (50Hz± - 0.4%) and quality voltage levels across the system.

Certifications

- Real-Time DevOps & GitOps Projects — *Udemy (In Progress)*
- Introduction to Software Engineering — *Coursera (Apr 2025)*
- DevOps (Beginner to Advanced with Projects) — *Udemy (Feb 2025)*
- Google Cybersecurity — *Coursera (Nov 2024)*

Skills

Cloud & IaC: AWS (EC2, S3, IAM, VPC), Terraform, CloudFormation (basics)
DevOps & Monitoring: Jenkins, GitHub Actions, CloudWatch (basics**)**
Containers: Docker, Kubernetes (fundamentals)
Languages: Python, Bash, SQL
Other: Linux, Networking (TCP/HTTP), Version Control (Git), Problem-Solving, Team Communication

---

Projects

DevOps Automation Projects

- Built Jenkins pipelines to automate build and deployment processes for multi-tier applications.
- Integrated Ansible for configuration management and Git for version control, reducing deployment time by 40%.
- Used Terraform and AWS to implement an automated CI/CD pipeline with CodePipeline and CodeDeploy for scalable cloud applications**.**
- Deployed a multi-stack web application (Nginx, Tomcat, MySQL, RabbitMQ, Memcached)

E-Commerce Oracle Database System

- Collaborated in a team to design and implement a relational e-commerce database with triggers, functions, and stored procedures to manage orders, inventory, and customers.
- Strengthened understanding of backend logic, transaction control, and data consistency**.**

SRS Document – Dish Dash Mobile App

- Contributed to the Software Requirements Specification for a food-ordering app (*Dish Dash*).
- Documented system capabilities, benefits, and UML diagrams to capture design intent and user flow.

- Improved skills in technical documentation, requirement analysis, and translating concepts into actionable engineering plans
